

Interior Innovation of the Year

Kodisoft's Smart Tables at Ultimate Family Suite

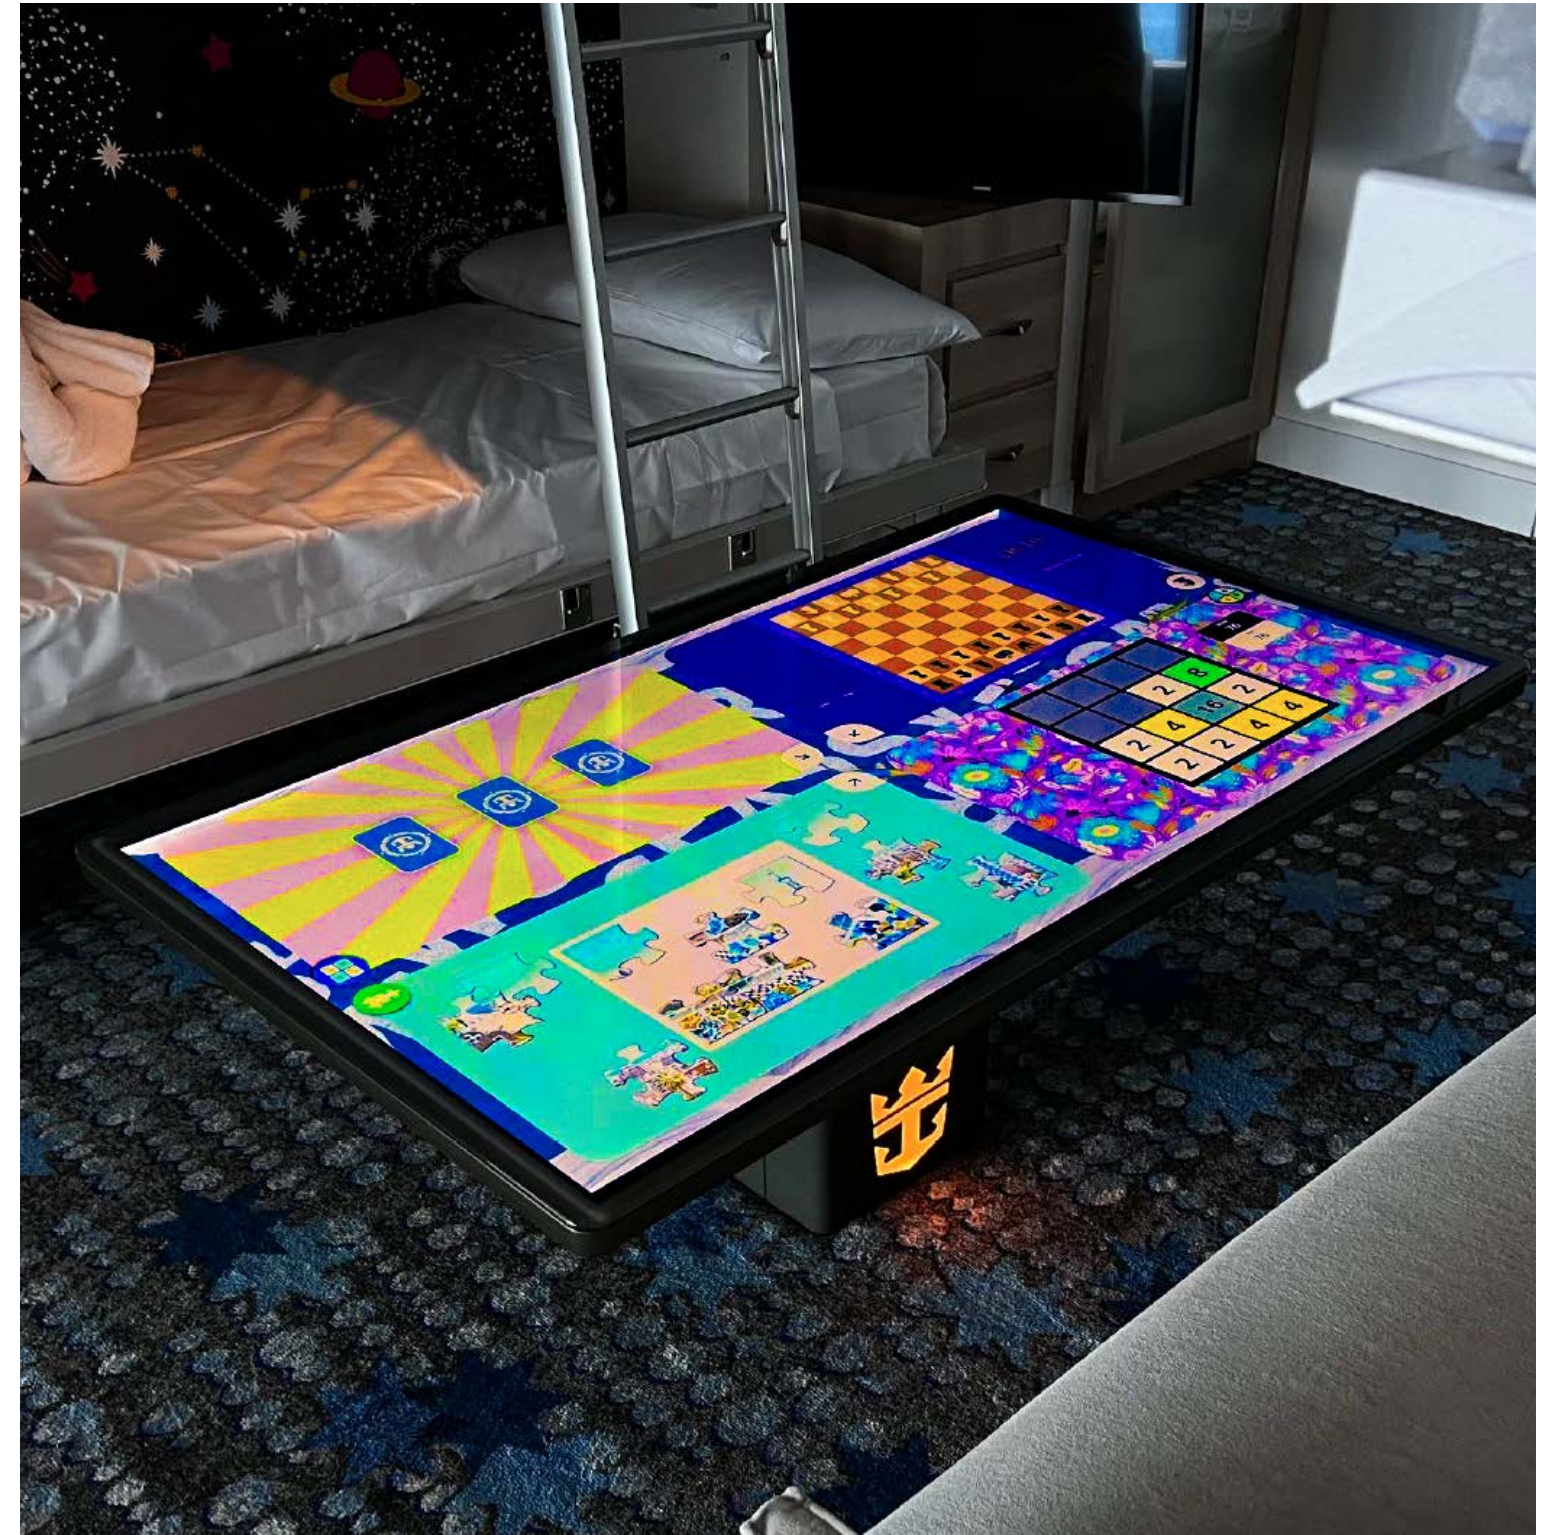

Kodisoft's smart tables provide a unique, interactive experience with features like collaborative games, direct ordering from onboard restaurants, infotainment, and control over smart suite features such as lighting. [Watch the video](#)

The suite's focal point is a super-long, all-interactive dining table for eight

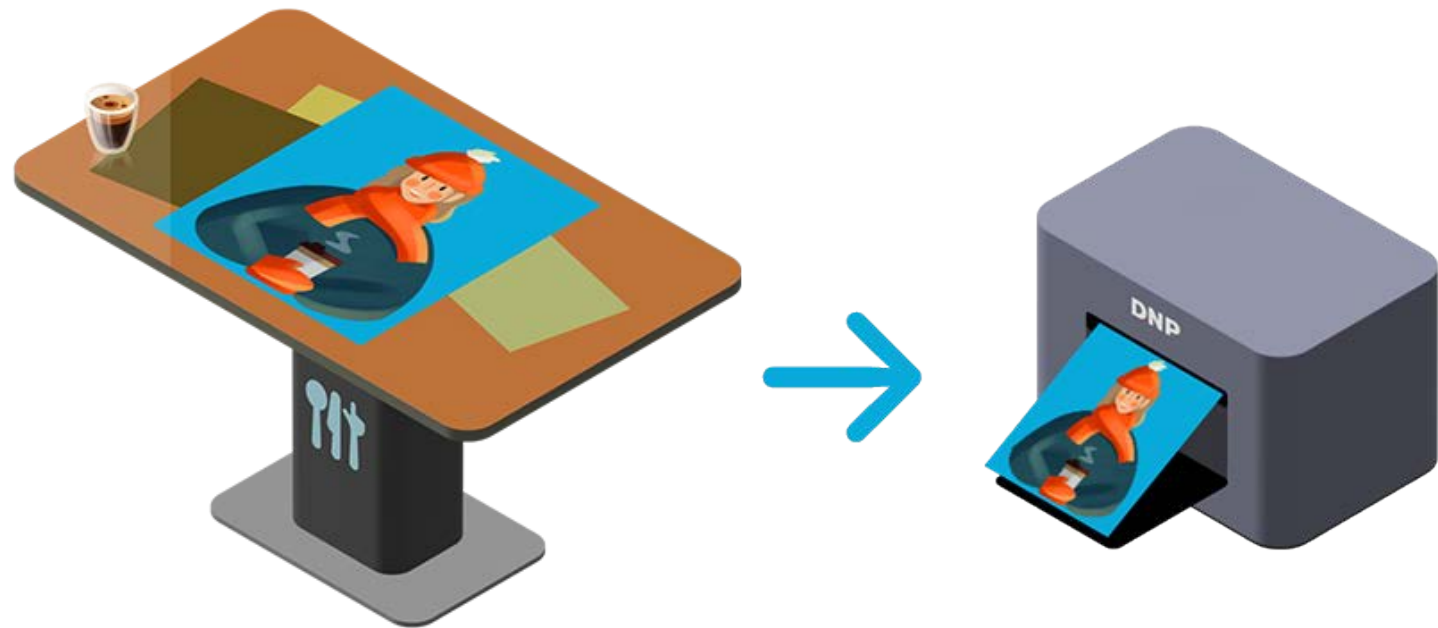

accompanied by a low-top table near the children's beds.

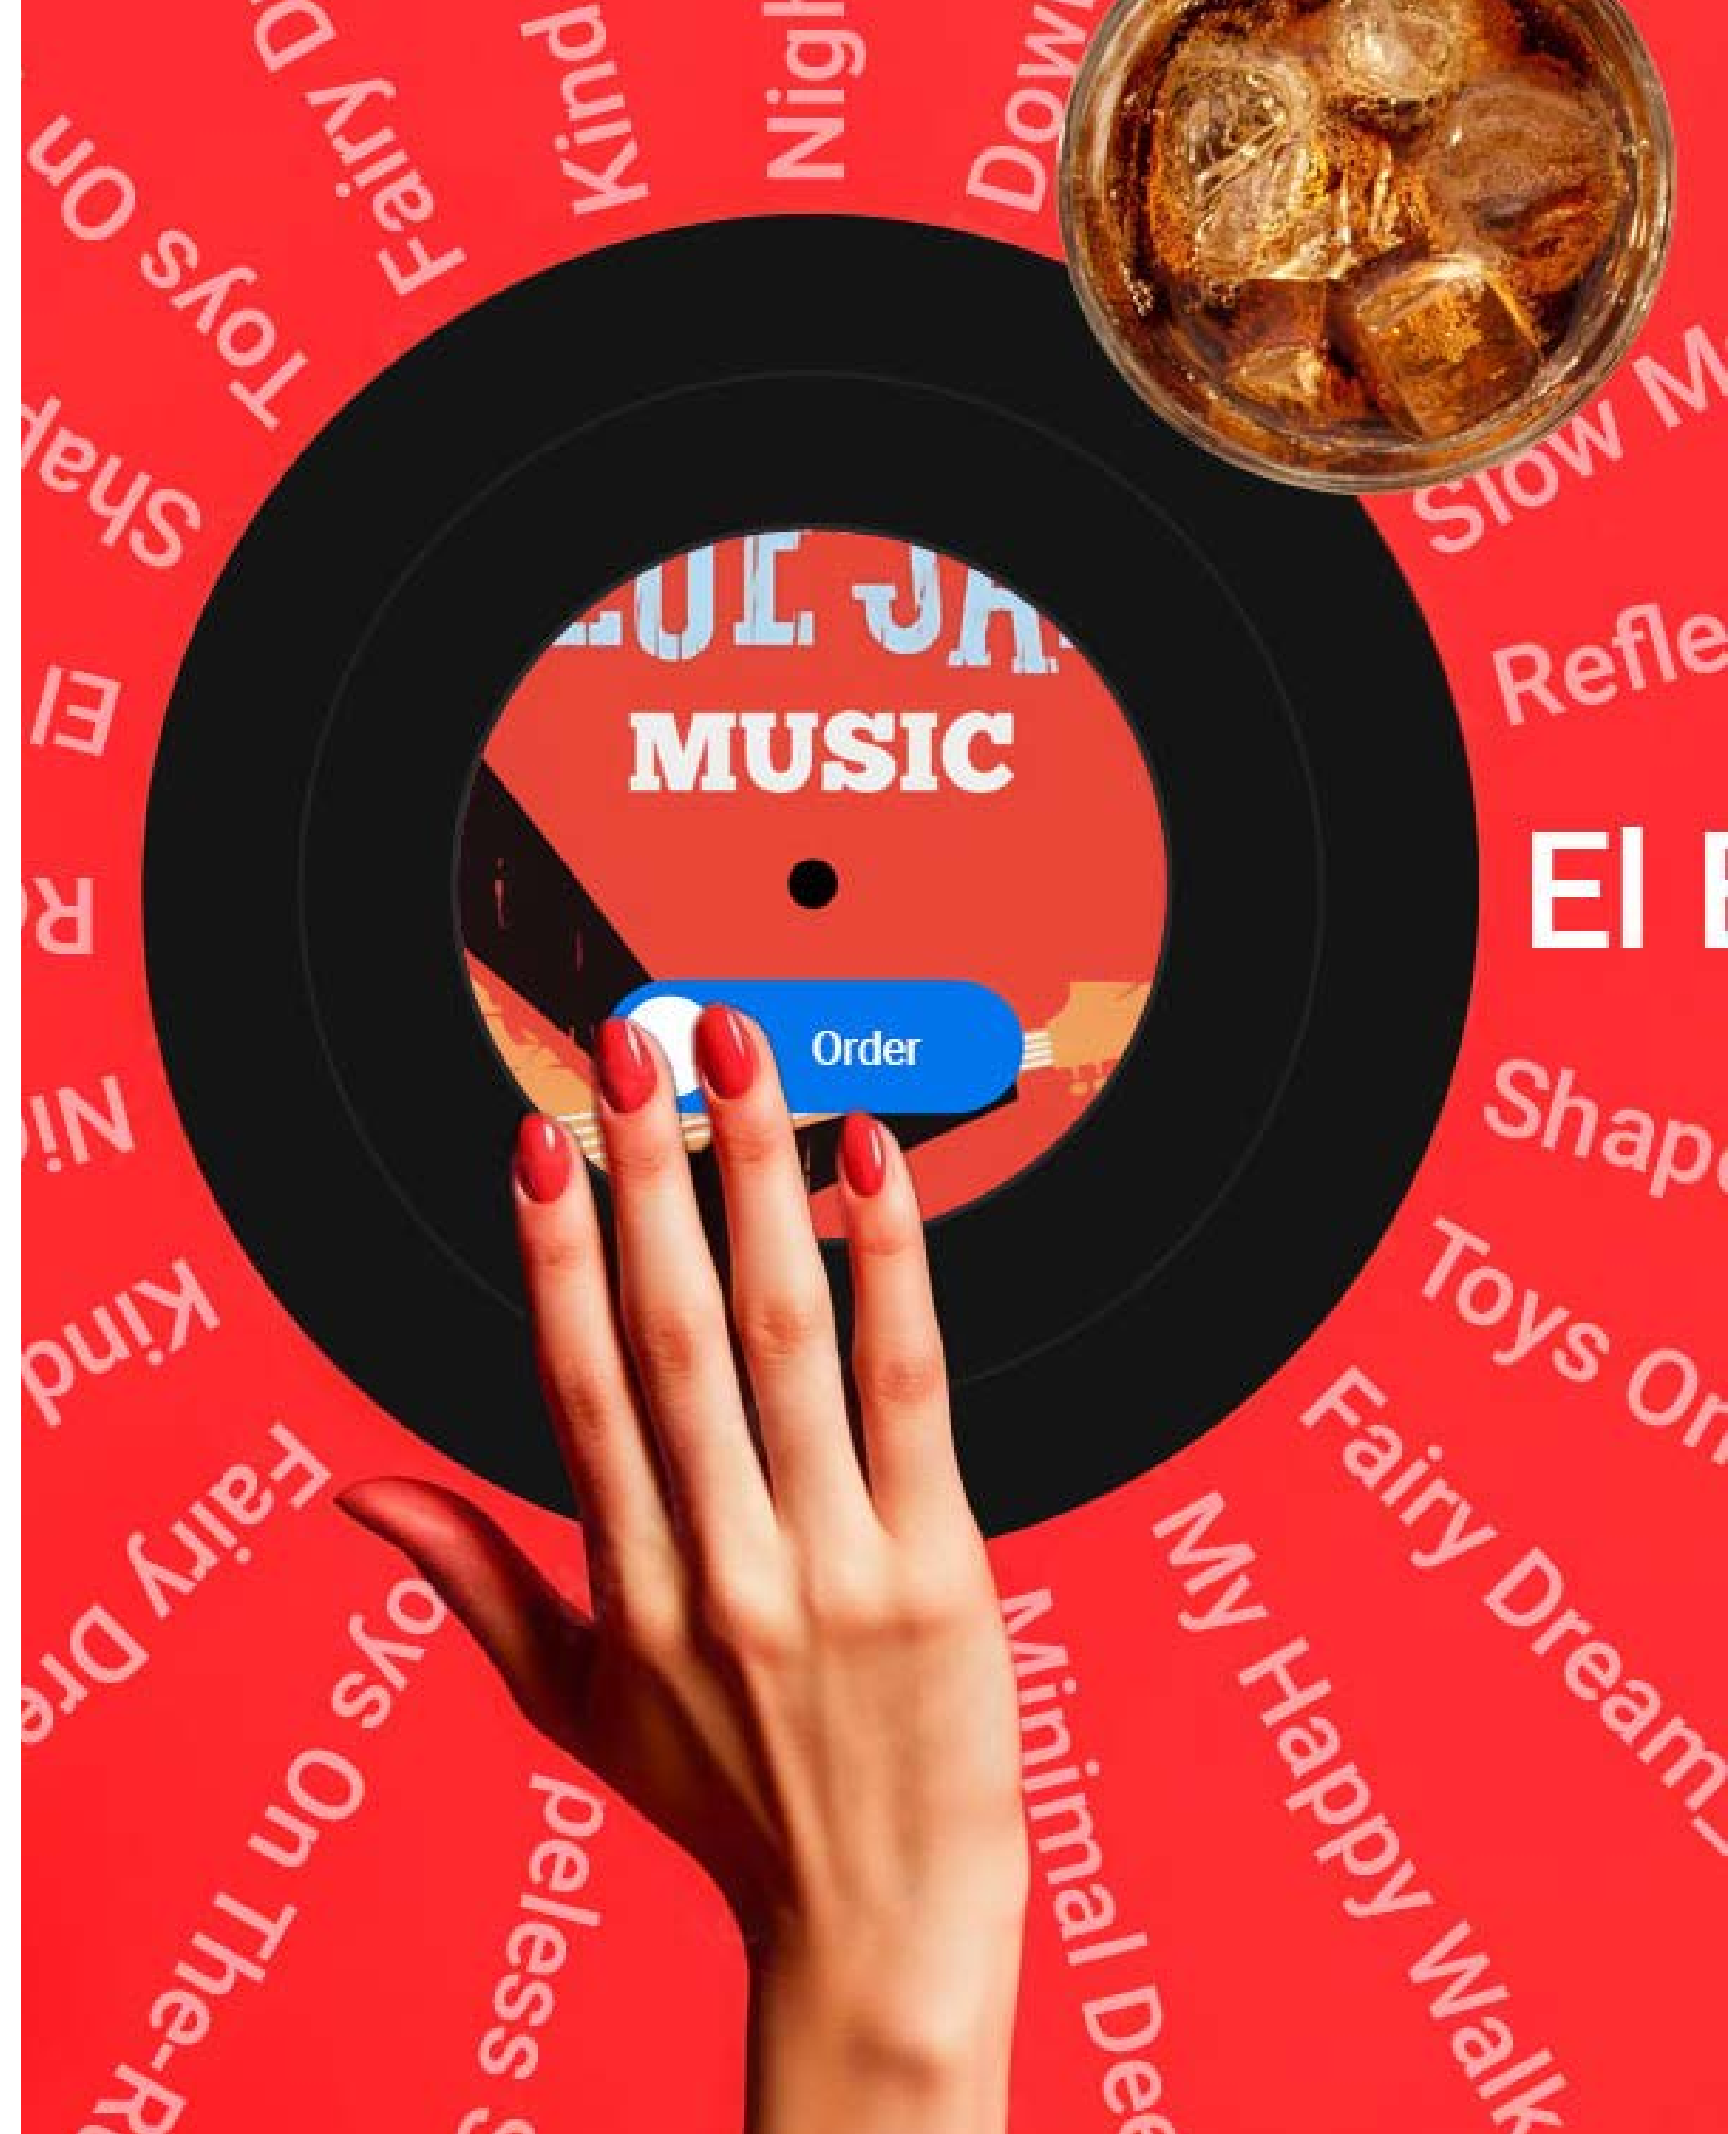

Ordering from any onboard specialty restaurant directly from the tables.

Photo sharing and instant printing capabilities.

Jukebox control from each table, connected to the main sound system.

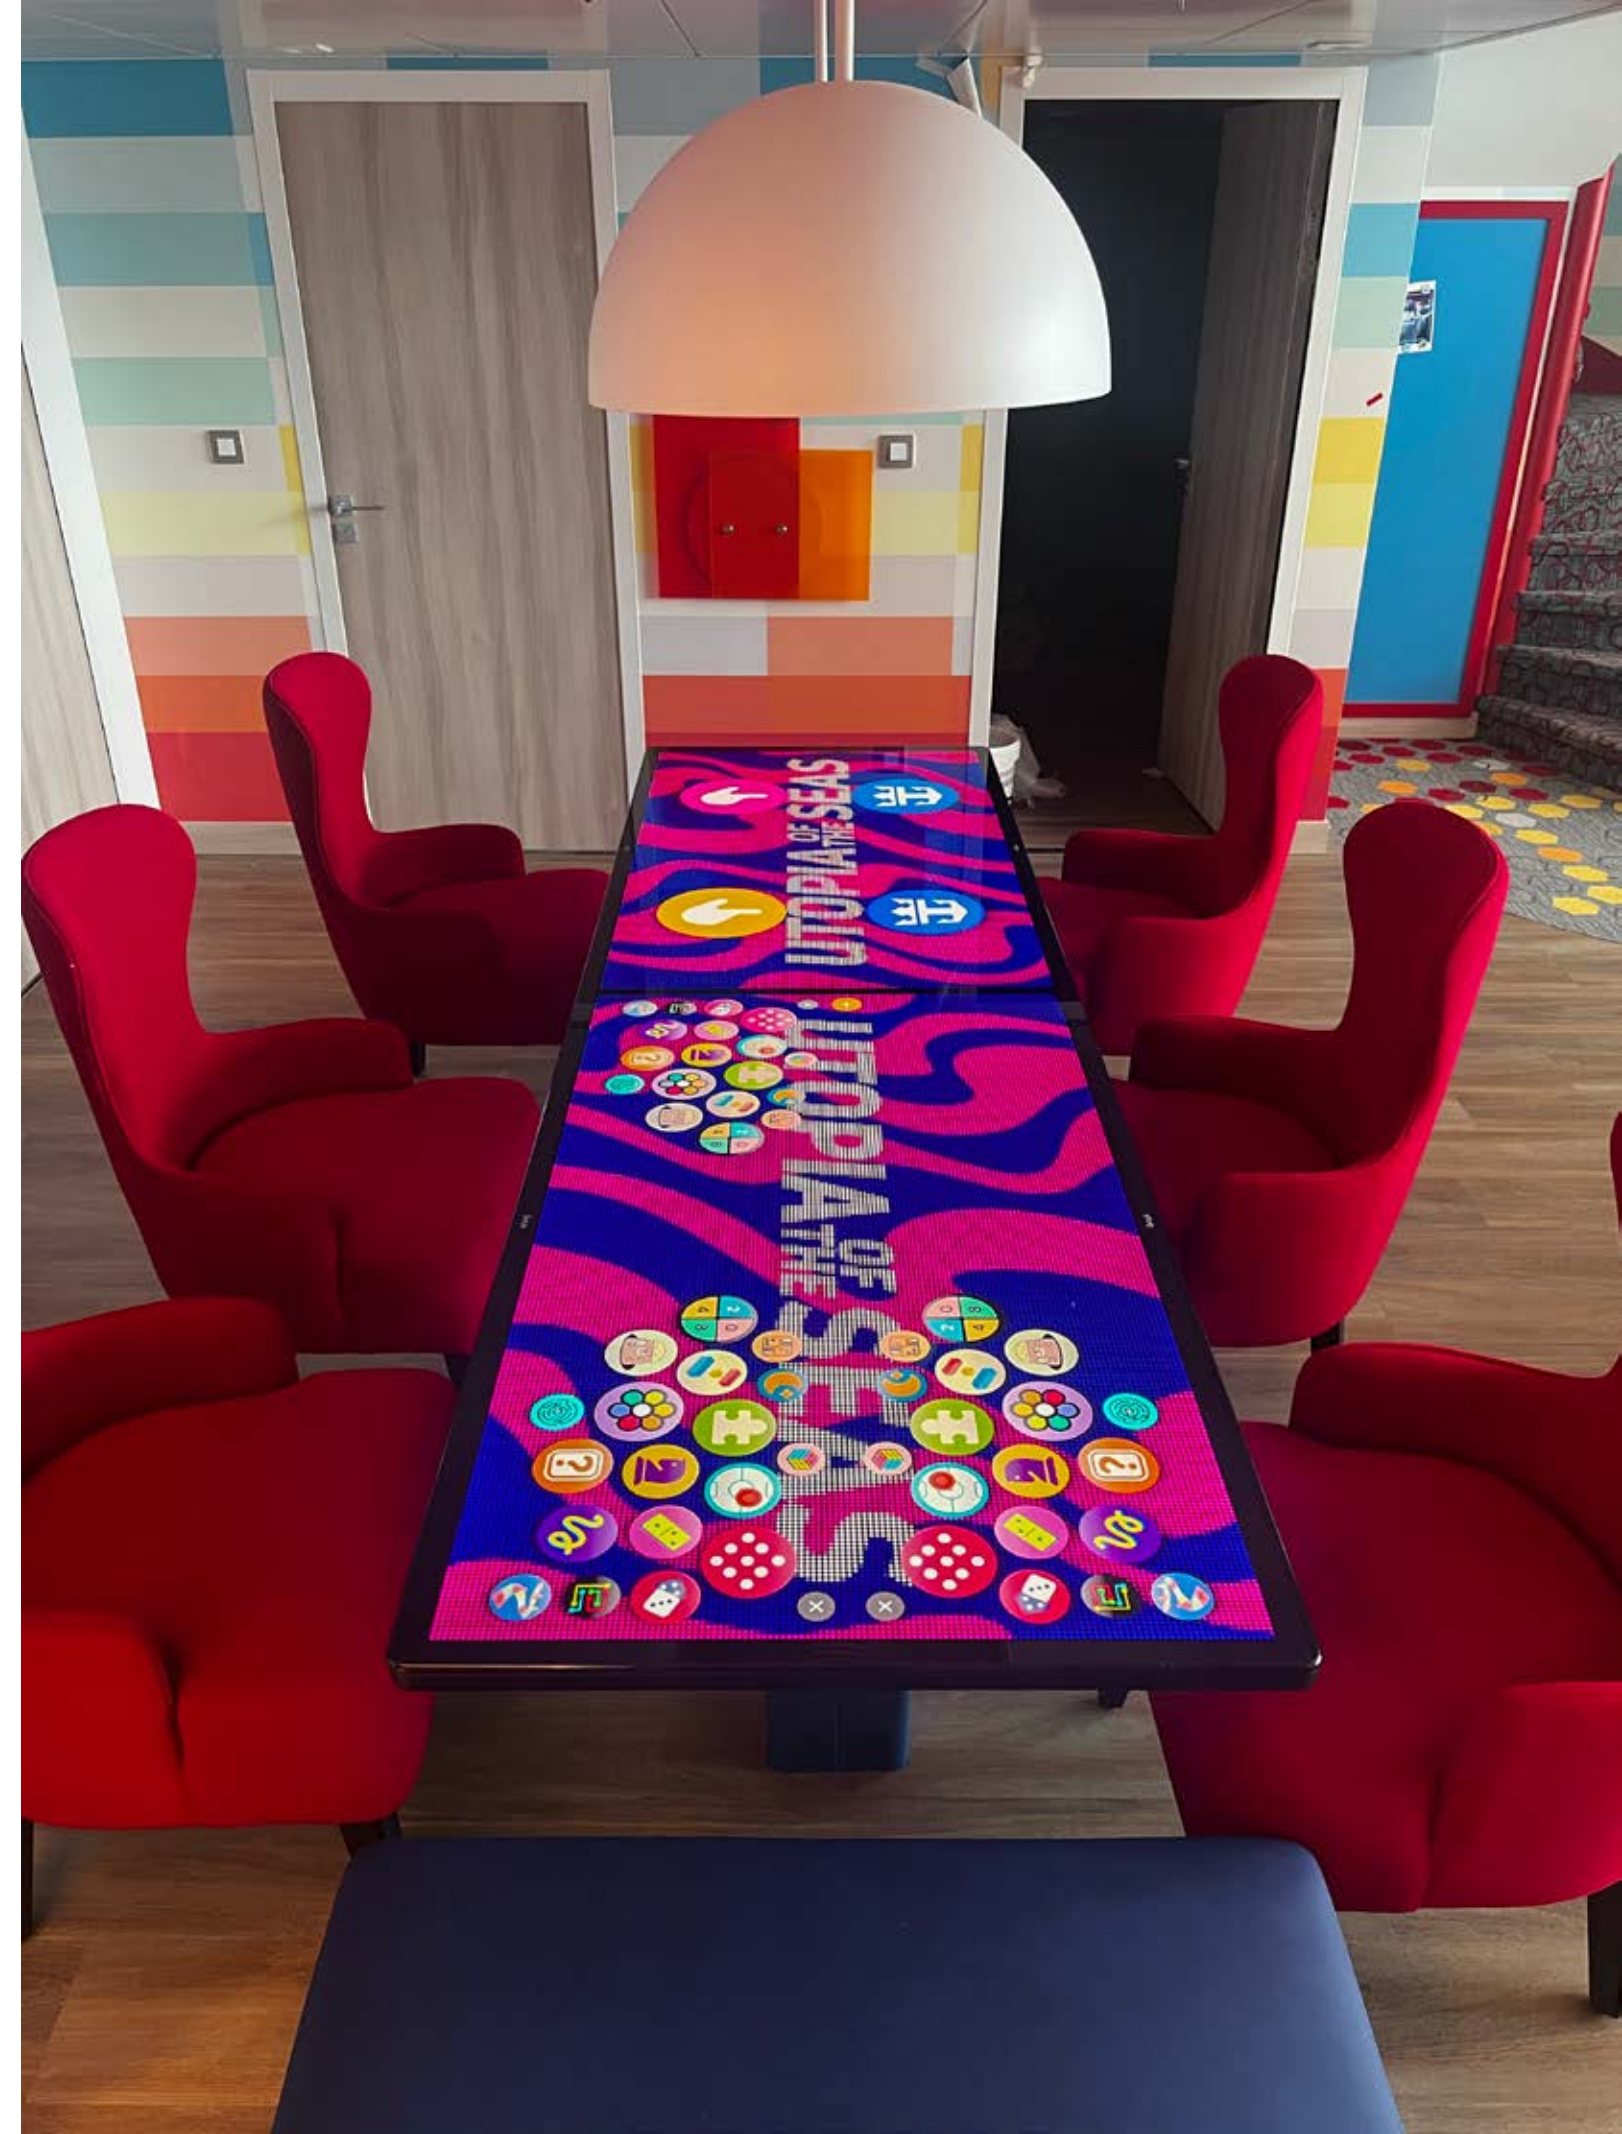

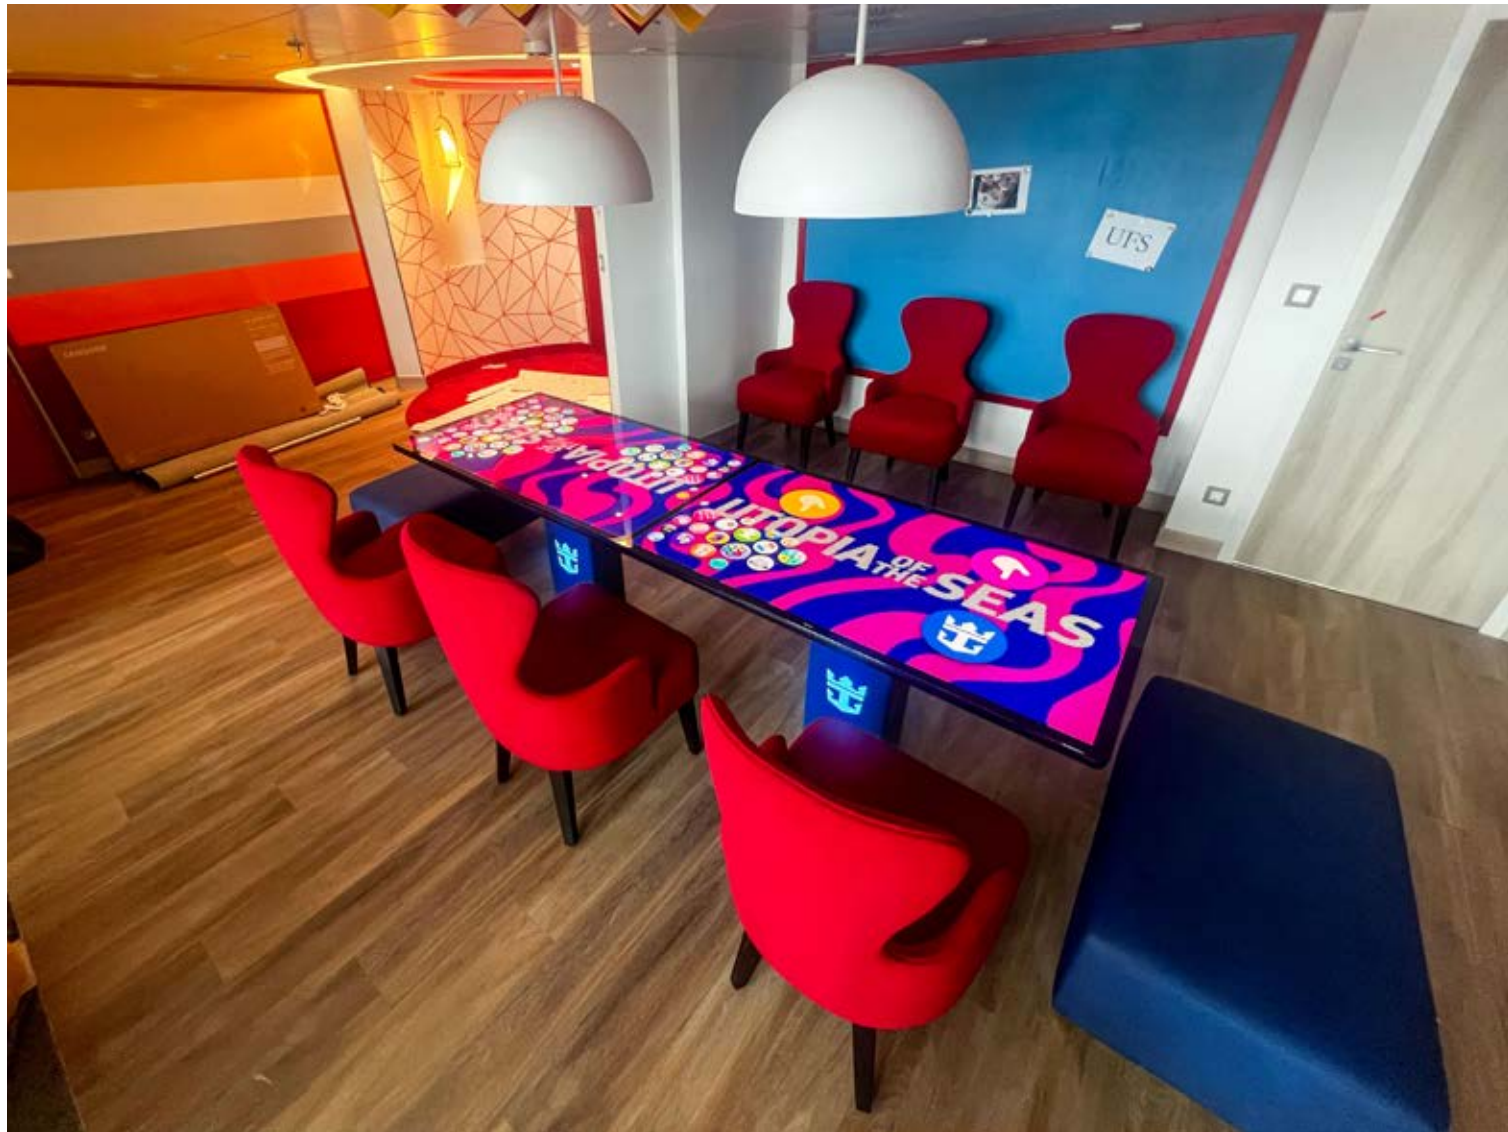

Access to 80+ collaborative games and apps.

Additional features include LED RGB Royal Caribbean logos on both sides of the table legs. These logos change color based on the active apps and games on the tabletop screen, serving as dynamic visual indicators of activity and enhancing the overall ambiance.

The minimalist glass-and-steel design integrates seamlessly into the suite's upscale interior, combining aesthetic appeal with functionality.

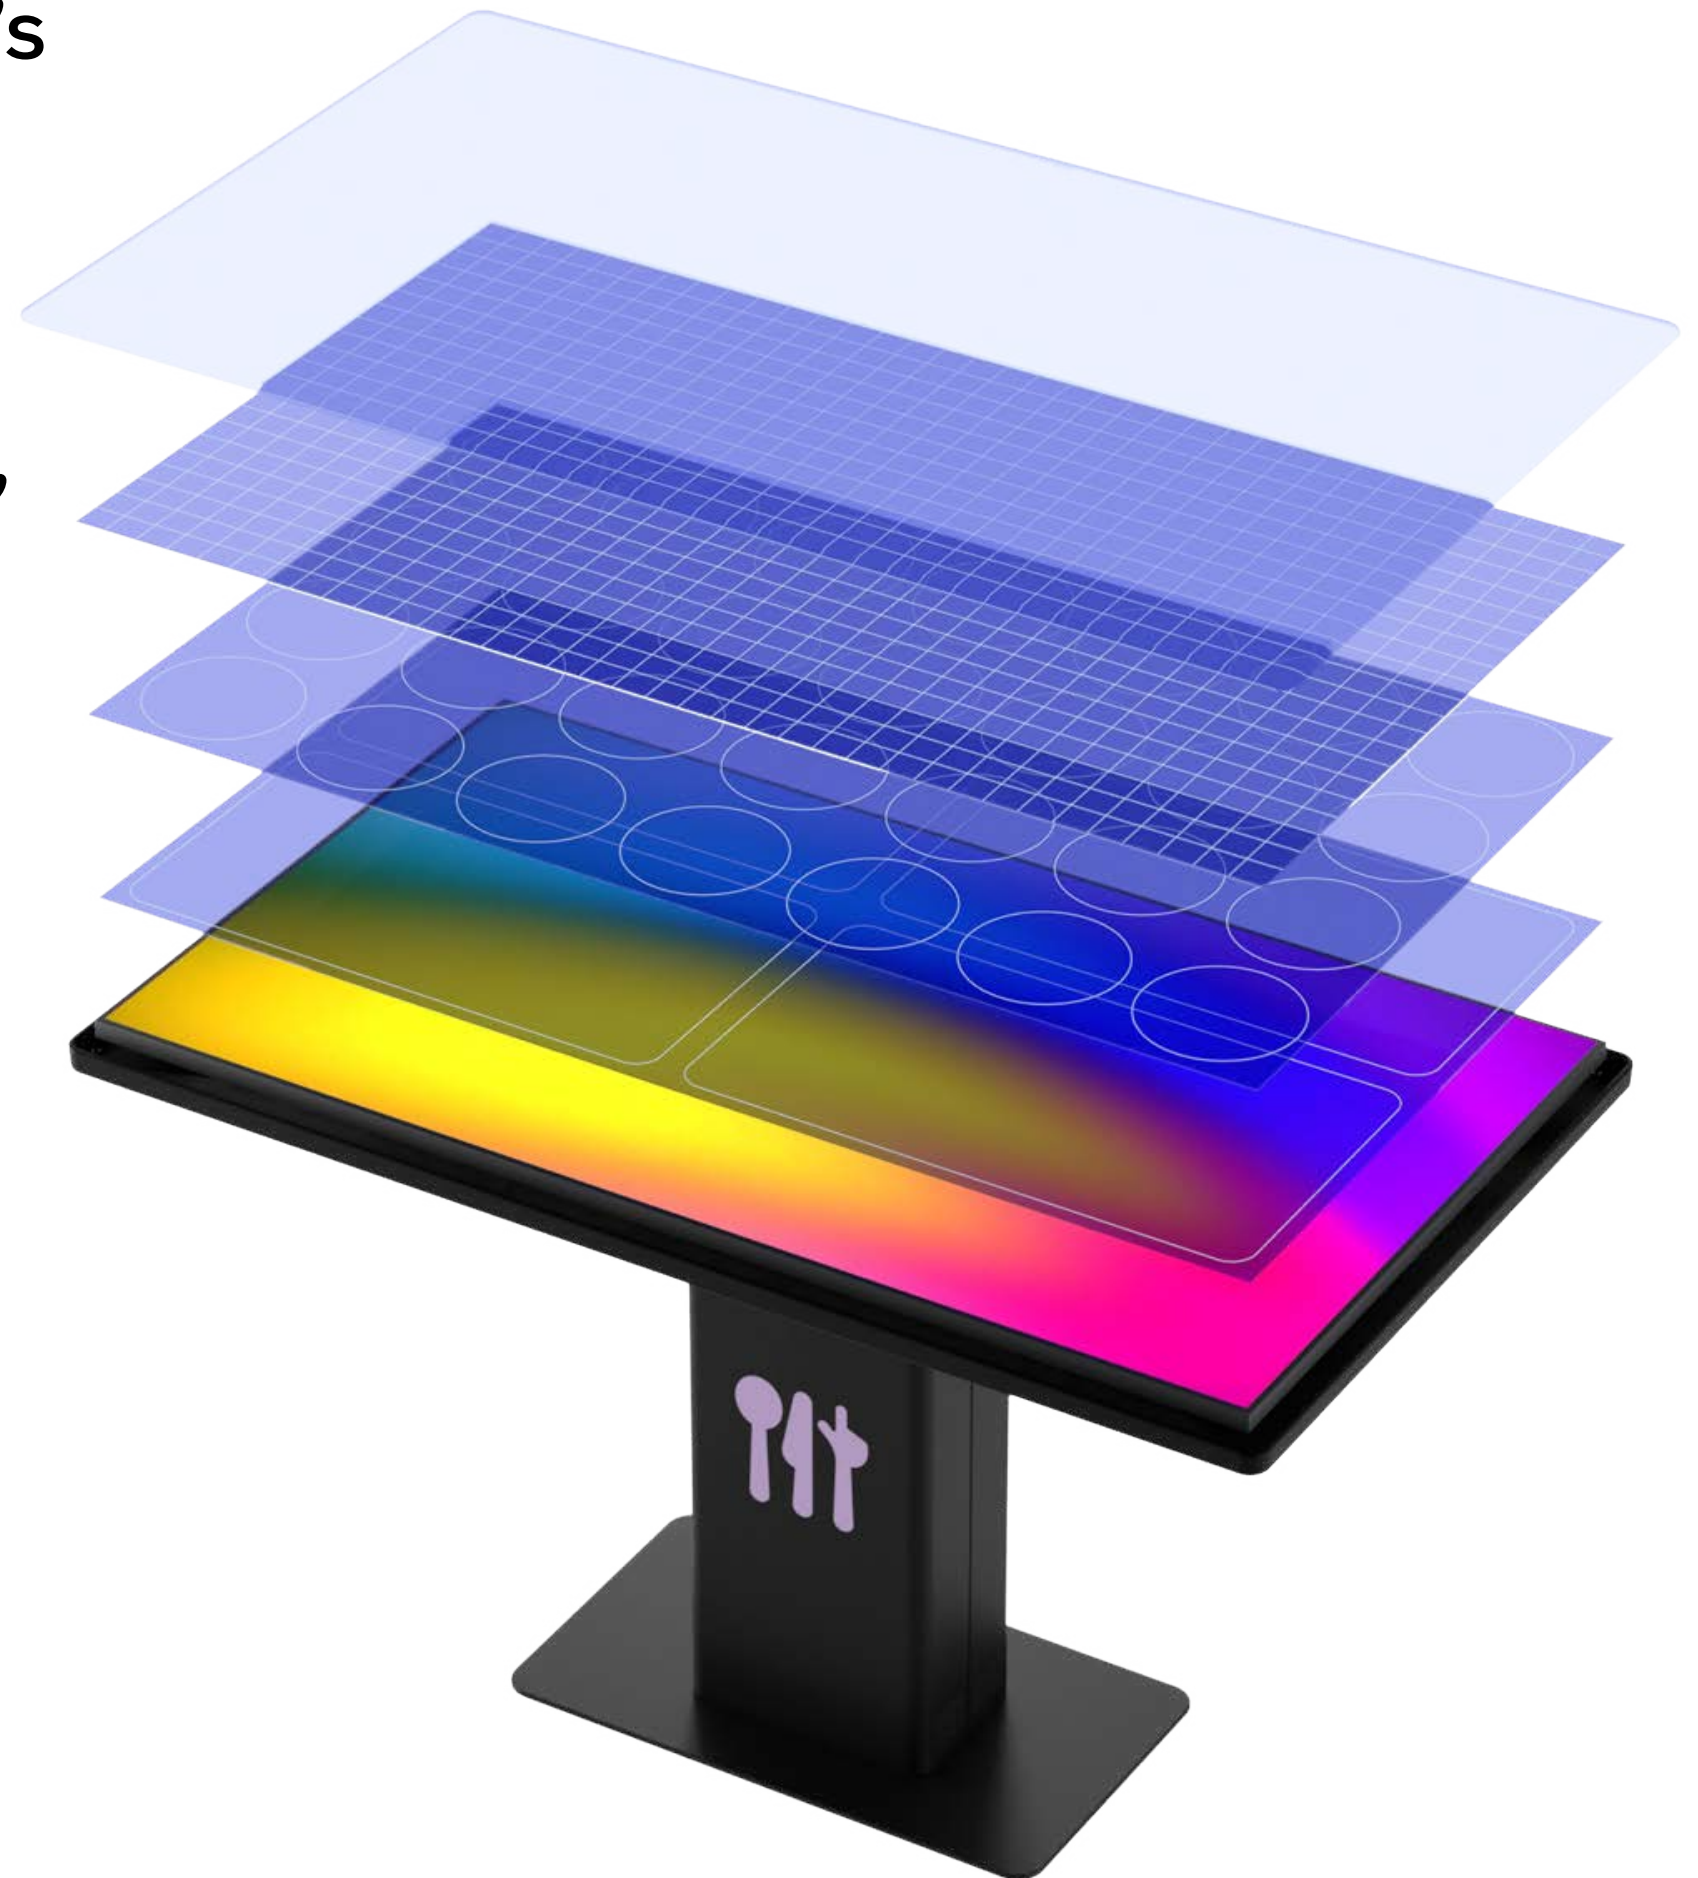

Engineered for Heavy Use

Constructed with vandal-resistant 8 mm diamond glass and steel, these tables are built to withstand rigorous use while maintaining a sleek appearance.

All of this is made possible by Kodisoft's industry-leading sensor technology, KoSense®. This technology, which is the company's main feature and intellectual property (IP), offers unique, ultra-fast multi-touch capabilities that handle over 1,000 simultaneous touches.

It is designed to function under thick protective glass up to 22 mm, with a response time faster than most smartphones, making it the ideal solution for public and high-traffic places and setting a new standard in interactive surfaces.

With over 15 years of innovation, Kodisoft's smart tables deliver a unique, high-tech experience that stands apart in the market. This world-leading product is not available from any other vendors, making Kodisoft the only suitable solution for public places. While there are hundreds of different interactive tables on the market, all of them use standard multi-touch sensor technology that is only appropriate for limited-use office environments.

Thank you
