# MKN STEELPLUS

over 40% CO<sub>2e</sub> reduced stainless steel\*

#for a better world of cooking

\*Scope 1,2,3 - Option

# Sustainability

Not only a key concern, but part of our DNA.

Sustainability is firmly rooted in our corporate philosophy. One of the characteristic features of MKN catering equipment is a very long service life. This saves resources, reduces CO<sub>2</sub> emissions, and avoids waste. As a successful global player we bear responsibility towards our customers, society and therefore also towards the environment. With our sights fixed on the future, we work daily to develop products that use as little energy and water as possible while performing reliably and efficiently during their many years of service.

When we address sustainability, we not only focus on our own processes, but also on how we cooperate with our suppliers, and on our commitment to society. Important aspects in this context include:

- a sustainable supply chain
- environmental standards and fair working conditions on the part of our suppliers
- cooperation with regional partners
- continued support of social projects in the region

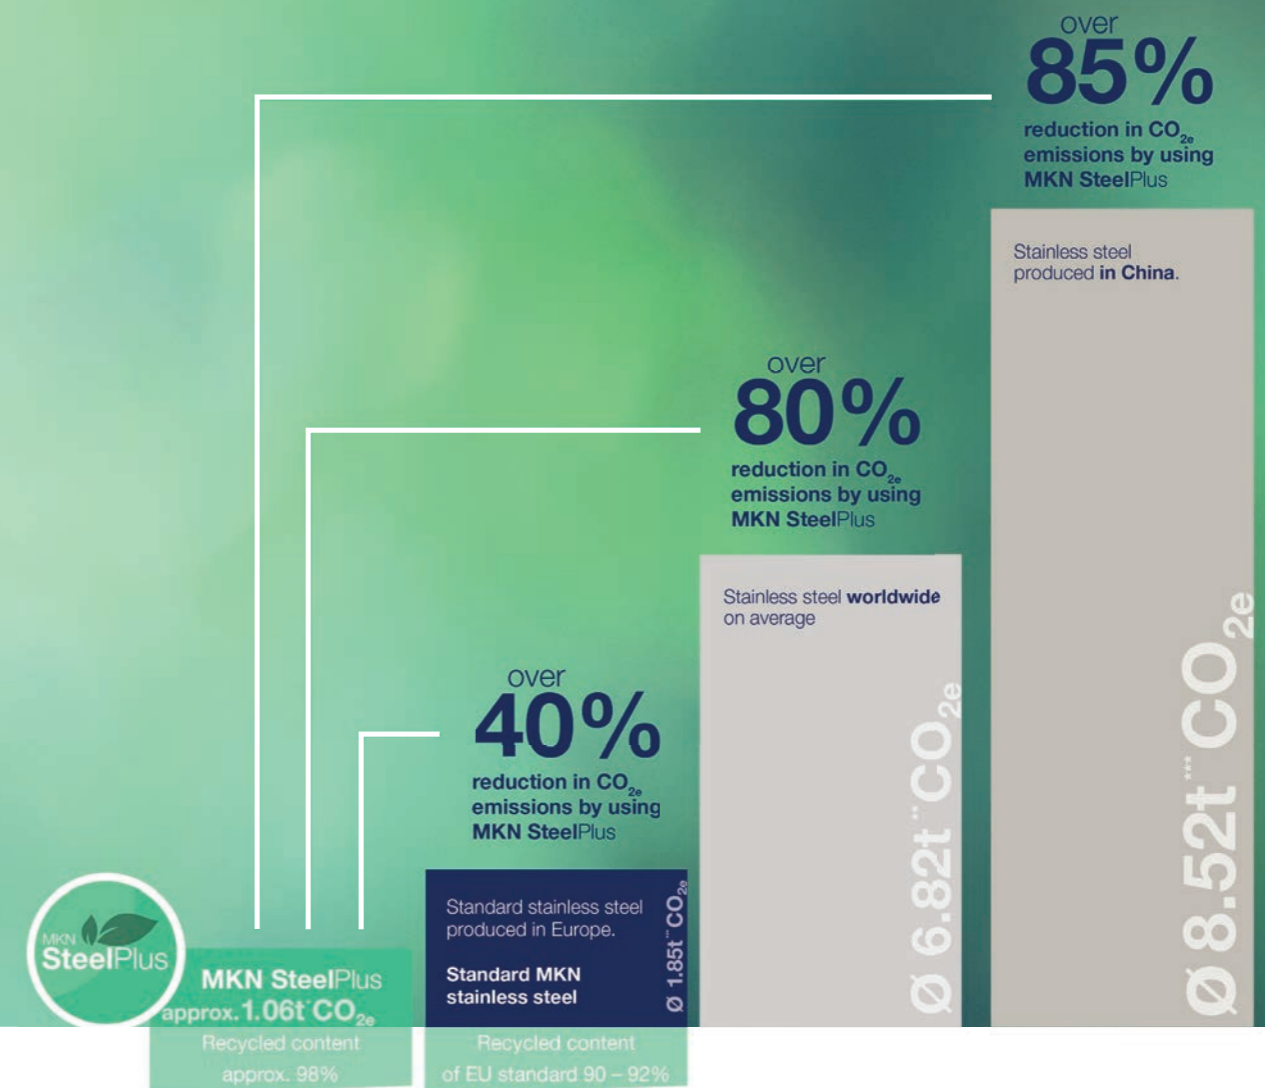

As a long-standing, dependable partner we seek to achieve maximum benefit with solutions engineered for the future.

**For our customers, for our employees, and for our environment.**

# MKN SteelPlus

over 40% CO<sub>2e</sub> reduced stainless steel\*

**Comparison of CO<sub>2e</sub> emissions in Steel production**  
Emission figures for production of 1 t stainless steel

Sources: \*Manufacturer certificate \*\*ISSF Report, Basis 30% steel scrap \*\*\* 304 grade Stainless Steel Carbon Footprint Comparison, EU, Indonesia and China 2022-07-07 R. Gyllenram and W. Wei, Kobilde & Partners AB 1

By purchasing the MKN SteelPlus option, MKN promises to process CO<sub>2e</sub> reduced stainless steel according to your order in its production. The ordered appliance is not manufactured directly with CO<sub>2e</sub> reduced stainless steel.

However, the purchase of the option increases the proportion of CO<sub>2e</sub> reduced stainless steel in MKN's total production by the proportion acquired.

\*Scope 1,2,3 - Option
